1. Safety Précautions

Information for parents

Please read the operating instructions and safety precautions carefully before use.

Explain the content to your children and the hazards associated with using the phone.

Remember to comply with legal requirements and local restrictions when using the phone, for example, in airplanes, petrol stations, hospitals or while driving.

Mobile phones can interfere with the functioning of medical devices such as hearing aids or pacemakers. Keep at least 20 cm (9 inches) between the phone and pacemaker. When using the mobile phone hold it to the ear which is furthest away from the pacemaker. For more

information, consult your doctor.

Always keep the phone and accessories out of reach of small children.

Small parts such as the SIM card, dust cap, lens ring and lens cap as well as the microSD card can be dismantled and swallowed by small children.

Do not place the phone near to electromagnetic data carriers such as credit cards and floppy disks. Information stored on them could be lost.

Permanent hearing loss may occur if you use earphones or headphones at high volume. You can adapt over time to a higher volume, which may sound normal but can be damaging to your hearing. Set your volume to a safe level. If you experience discomfort or

buzzing in your ears, reduce the volume or discontinue use of your earphones or headphones.

Ring tones, info tones and handsfree talking are reproduced through the loudspeaker. Do not hold the phone to the ear when it rings or when you have switched on the handsfree function. Otherwise you risk serious permanent damage to your hearing.

The mains voltage (V) specified on the power supply unit must not be exceeded. Otherwise the charging device may be damaged.

The power supply must be plugged into an easily accessible AC mains power socket when charging the battery. The only way to turn off the charging device after charging the battery is to unplug it.

You may only open the phone to replace the battery, SIM and microSD card. You must not open the battery under any circumstances. All other changes to this device are strictly prohibited and will invalidate the guarantee.

The phone may cause interference in the vicinity of TV sets, radios and PCs.

Dispose of unwanted batteries and phones as permitted by the laws in your countries.

Only use original batteries and charging devices. Otherwise you risk serious damage to health and

property. The battery could explode, for instance.

All batteries can cause property damage, injury or burns if a conductive material such as jewelry, keys or beaded chains touch exposed terminals. The material may complete an electrical circuit and become quite hot. Exercise care in handling any charged battery, particularly when placing it inside your pocket, purse or other container with metal objects.

Do not dispose of batteries in fire as they may explode.

Improper use will invalidate the guarantee! These safety instructions also apply to original accessories.

As mobile devices offer a range of functions, they can be used in positions other than the head, such as directly on the body. In this case, the limits are met too.

2. Phone Overview

Communication control keys

Master SIM key is used to make a call after a number has been entered in idle screen, or to answer an incoming call. In idle

screen, press Master SIM key to show call logs of Master SIM and Slave SIM.

End key is used to end a call during calling or conversation, or to quit the menu and return to idle screen. Press and hold the End key for about two seconds to turn on/off the phone.

Direction keys

Go to **Settings > Phone settings > Dedicated key** to set direction keys as per your choice.

OK key

In idle screen, press OK key to access the audio player.

Left and right soft keys

In idle screen, press the left soft key to access main menu screen, press the right soft key to directly access the phone book list. During menu operation, the current functions of the left and right soft keys are shown in the bottom line of the screen, and

they are closely related to the current status of the phone.

Number keys

In idle screen, press number keys (0-9) to enter numbers.

In idle screen, press and hold number keys (2-9) to start speed dial.

You can also use number keys to select menus. If a number is shown before an option in menu list, you can select the option quickly by pressing the corresponding number key.

Asterisk key

In idle screen, press the asterisk key to enter "*".

Hash Key

In idle screen, press the hash key to enter "#".

Input switch key

Switch the input method between **Numeric**, **Multitap** and

Smart in any text editor screen.

Shift key

In standby mode, press and hold it for about 3 sec to turn on/off the torch.

Input capital letters or small letters while the input method is **Multitap** or **Smart**.

Fn key

Switch the input content labeled in the keypad in any text editor screen. Press it once to input the symbol labeled in the keypad temporarily, press it twice to input the symbol labeled in the keypad permanently, press it three times to restore to input the letter labeled in the keypad according the current input method.

SPACE key

In standby mode, press and hold it for about 3 sec to directly access the FM radio module.

Insert a space character in any text editor screen.

Send key

In standby mode, press it to directly access the **Text Message** screen.

SYM key

In standby mode, press and hold it in idle screen to activate/deactivate the Silent mode.

In standby mode, press RSK and then the SYM key to lock the keypad, to unlock by pressing the RSK and then the SYM key again.

Show the symbol selected screen in any text editor screen.

Enter key

Add a new paragraph in text editor screen.

Confirm or enter a selection or functioning.

Del key

Press it once to delete the last character in the display, long press it to delete the characters consecutively.

Connection jack

The connection jack is used to connect charger, headset.

Icons displayed on the main screen (Icons may be changed without further notice)

The following icons may be displayed in the first line of the screen.

Icon	Indicates
	New multimedia message received.
	A new text message is received.
	A new multimedia message is received.
	MP3 music is playing in the background.
	Alarm activated.

	Keypad locked.
	Battery power level.
	The call forward function is activated.
	General profile activated.
	Outdoor profile activated.
	Silent profile activated.
	Missed call(s).

3. Getting Started

What is a SIM card

When registering your mobile phone number, you will have a SIM card (Subscriber Identity Module) provided by the network operator.

The SIM card has information reserved for your use. It includes your phone number, PIN (Personal Identification Number), PIN2, PUK (PIN Unlocking Key is the password to unlock PIN), PUK2 (password to unlock PIN2), IMSI (International Mobile Subscriber Identity) number, network information, phone book data, SMS data and so on. If it is lost, contact your network operator immediately for help.

PIN code

PIN is the password provided by your network operator. It is usually 4 digits. When you input the PIN code, the screen displays “*” to replace the number entered.

PIN is used to access the SIM card. If the PIN protection function is enabled, the screen will display “Enter PIN” each time the phone is switched on. You can deactivate this feature but you risk unauthorized use of the phone. Some network operators do not permit deactivating the control.

PIN2 code

PIN2 is required for some specific functions provided by the network, such as the charge information.

Note: If you enter the PIN incorrectly three times in a row, the SIM card will be locked. Please contact your network operator immediately for decoding. Attempting to decode by yourself may result in the permanent failure of the SIM card.

PUK code

PUK (8-digit) unlocks a locked PIN. If you enter the PUK incorrectly ten times in a row, the SIM card will become invalid. Please contact your network operator for a new SIM card.

Installing the SIM card

1. Press and hold the ending key to turn off the phone.
2. Remove the battery cover and then the battery.

3. Insert the SIM card into the card holder. Ensure that the cut corner is at the top left and the metal contacts face the phone.
4. Re-install the battery. Place the battery cover onto the back of your phone and slide it forward until the latch catches the cover.

Note: A SIM card can be easily damaged if its metal contacts become scratched. Therefore, take special care when holding or inserting it and keep it away from small children.

Charging the battery

The battery is not fully charged when first unpacked. It takes three charging-discharging cycles for the battery to reach its peak performance. The battery can be charged and discharged hundreds of times. However, the capacity of the battery will be reduced each time it is charged/emptied, and it will eventually wear out. When the talk time and the standby time are noticeably shorter than normal, replace the battery. Use original batteries and charging devices only.

Unplug the charger from the outlet and the phone when not in use. Do not leave a fully-charged battery connected to a charger because overcharging may shorten the lifetime of the battery. If unused, a fully-charged battery will lose its charge over time.

If the battery is completely discharged, the charging may not start immediately when you plug in the connector. Wait 10 to 15 minutes for the phone to begin charging.

Use the battery only for its intended purpose. Never use any

charger or battery that is damaged.

Do not short-circuit the battery. An accidental short circuit may occur when a metallic object such as a coin, clip or pen causes the direct connection of the positive (+) and negative (-) terminals of the battery, for example, when you carry a spare battery in your pocket or purse. Short circuit may damage the battery and the connecting object.

Storage at too high or low temperatures will result in a gradual capacity loss. As a result the operating time of your mobile phone may be considerably reduced, even after the battery is fully charged.

Do not dispose of batteries in a fire as they may explode. Batteries may also explode if damaged. Dispose of unwanted batteries and phones as permitted by the laws in your countries.

Talk and Standby time of battery vary depending on signal strength on the cellular network, the parameters set by the network operator and usage of the battery.

Battery:

It comes with 1000mAh battery which gives about 6 days of standby time (under test conditions) so that you can easily keep in touch with your loved ones for so many days without charging the battery.

Battery type	Standby time	Talk Time
Each Li-ion battery	6 days	180 minutes

*** Note: The actual operation time of a battery varies based on the operation mode, network settings and call settings.**

Charge a battery according to the following steps:

1. Connect the charger to the connection jack of the phone in proper direction, and connect the charger to a main socket.
2. The phone displays "Charger Connected!" and starts charging after properly connected. The battery icon dynamically displays the charging process. In switch-off state, the phone dynamically displays the charging process.

3. When the battery is fully charged, the charging process stops automatically, and the battery icon indicates full grid on the screen. After the battery is fully charged, remove the charger from the phone and socket as soon as possible.

Note:

- After the phone has run out of battery, we recommend that you recharge the battery in time. If you do not recharge the battery in two days, the phone may enter the slow charging mode. When you recharge the battery, there may be no display temporarily. After about 10 minutes, the charging indicator icon is displayed on the screen of the phone. If you do not recharge the battery more than two days, the battery may enter the deep discharge protection state. Thus, in order to get the battery into normal charging mode quickly, we recommend that you charge the battery on an adapter to activate the battery for charging, and then charge the battery with the phone. Alternatively, you can charge the battery with the adapter.
- Do not change the parts and accessories of the battery by

yourself or take off the battery cover for safety.

- Use only original batteries and charging devices. Otherwise you risk serious damage to health and property.
- The temperature range for charging a battery is -10°C -55°C. Do not charge batteries in too high or too low temperature.
- Do not use the phone while charging.
- It takes approximately four hours to fully charge a battery. Remove the charger quickly after the battery is fully charged.
- After pulling out the battery system date and time will reset to default values (factory settings).

Memory:

This phone supports to install dual SDcards at the same time, up to 2 GB memory space for each SDcard allows you to save any

data, music etc. The maximum memory space supported by the two SDCard is 4GB.

T-Flash/Micro SD card: It is a type of memory card.

Insert T-Flash card into mobile phone

Multi SIM:

This phone supports Multi-SIM (GSM+GSM) card with dual-standby. When in Dual Stand by mode:

a) You can make or receive calls from/at SIM1 card/SIM2 card,

- b) You can send or receive SMS/MMS from SIM1 card/SIM2 card,
- c) You can reply/forward SMS of SIM1/SIM2 of the phone from other SIM,
- d) You can access Phonebook / Call Logs of SIM1 card/SIM2 card,
- e) You can access WAP/GPRS (for internet access on phone) on SIM1 card/SIM2 card.

Stand By Mode Setting:

Note: This phone supports Dual SIM, Dual standby but single calling i.e If you make a call from SIM1 card then you cannot receive another call on your SIM2 card at the same time or Vice-Versa. Hence incoming / outgoing / call conference / call swap on any other SIM1 card/SIM2 card is not possible.

Switching the phone on

Press and hold the ending key to turn the phone on/off. The phone will automatically search for the network, if there is no password protection for the SIM card and the phone. After the phone is registered on the network, the name of the service provider will be displayed on the idle screen. Then you can make or answer a call.

The phone remains in searching state if it fails to find the available network system temporarily.

After the phone is switched on, if a password is required, enter the correct PIN code and press the left soft key or the OK key for confirmation. After unlocked, the phone will display the name of the registered network and the signal strength. Contact your network operator if you do not know the PIN code. The default password of the phone is "1122".

After the phone is switched on, if it displays "Insert SIM Card" on the screen, press and hold the ending key to turn the phone

off, and check whether the SIM card is properly inserted.

Switching the phone off

Press and hold the ending key to turn the phone off. After the switch-off animation is displayed on the screen, the phone will be switched off.

Do not attempt to turn the phone off by directly taking out the battery.

4. Text Entry

This phone supports the qwerty keypad which is the most useful function for editing text.

Numeric

When the input method icon is shown as "123", input numbers directly with number keys.

Multitap ABC, Abc and abc

Press the keypads to enter the corresponding characters which labeled on them.

Smart ABC, Abc and abc

Press each key associated with the letter you want to enter only once. The letters you have entered appear at the bottom of screen.

Set default input method

Set the preferred input method by the route **Settings > Phone Settings > Preferred Input Methods**. The preferred input method is the default input method ever entering the text editor screen.

Changing the input method

In editing screen, select **Options > Input Method** to directly select the required input method. The current text input method is indicated in the upper left corner of the display.

Press **Input switch key** to switch the input method between **Numeric, Multitap and Smart**.

Press **Shift key** to switch the types of input method within **Multitap/Smart** such as **Multitap/Smart ABC, Abc** and **abc**.

Inserting symbol

Press the **SYM key** and select the required symbols.

Press **Fn key** to easily insert a symbol using qwerty keypad.

Press it once to input the symbol labeled in the keypad temporarily, press it twice to input the symbol labeled in the keypad permanently. Press it three times to restore to input the original letter according to the current input method.

Insert a space

For any text input method press **SPACE key** to insert a space character.

Delete character

Press **RSK(Clear)** once to delete the last character on the display, press and hold it to delete all entered text.

Press the **Del key** once to delete the last character in the display, long press it to delete the characters consecutively.

Add new paragraph

Press **Enter key** to add a new paragraph.

5. Calling

Making a call

In idle screen, enter a phone number and press the “Master SIM key”/“LSK” to make a call by the master/slave SIM.

Making an international call

1. Press the plus key “+” to enter “+”.
2. Enter the country code, area code and phone number.
Press the “Master SIM key”/“LSK” to make a call by the master/slave SIM.

3. **Dialing an extension number**

Enter the number, and then press the P key to enter “P”, or press the W key to enter “W”. Then enter the extension number.

Correcting a key-in error

Press the right soft key to delete the last character on the display.
Press and hold it to clear all entered text.

Making a call from phone book

1. In idle screen, press the right soft key to enter **Phonebook** list, or enter the menu and select **Phonebook**.
2. Enter the quick search screen, scroll and select a contact person. This quick search function is advanced option and hence called as Intelligent Quick Search. Just type the first character of the name in the quick search and you will get all the contacts matching your entry. It makes it simpler to search any entry.

Press the “Master SIM key” to make a call by the master/slave SIM.

Dialing a previous number

1. In idle screen, press the “Master SIM key” to display **Call Logs of** master SIM and slave SIM. Press the up and down direction keys to select a number.
2. Press the “Master SIM key” to make a call by the master

SIM.

Dialing a speed dial number

In idle screen, press and hold the corresponding number (2-9) in the speed dial list to make a call. Note that number key 1 is reserved for the voice mail number (to get Voice mail number, Please contact your Service provider).

To set speed dial,

1. Go to **Phonebook > Phonebook settings > Speed dial > Enable speed dial** to enable the function.
2. Edit the speed dial numbers in **Phonebook > Phonebook settings > Speed dial > Set number > Options > Edit**.

Listening to voice mail

Press and hold number key 1.

You need to set the voice mail number and store it on your SIM

card. To set the number, go to **Message> Text message> Voicemail server > Master SIM Voicemail server**, select **Options** and then **Edit**.

Answering a call

- Press the Master SIM key.
- Press the OK key, or select **Options** and **Answer**.

Make call Silent

- Press the RSK.

Rejecting a call

- Press the ending key.

Ending a call

Press the ending key.

Call options

Press **Options** during a call for more options. Options vary depending on the current situation.

Hold Single Call	Hold the current call.
End Single Call	End the current call.
New Call	Add a new call and talk with more than one party at a time.
Phonebook	Use Phonebook to search for numbers.
Message	Read/write a message during a call.
Sound Recorder	Record the call.
DTMF	Enter tone sequences (number) for remote inquiries to an answering machine.

6. Menus

6.1 Phonebook

The phone provides two kinds of storage media: SIM1 card/SIM2 card and phone. The phone can store 800 entries with multiple fields. The capacity of the phone book on your SIM1 card/SIM2 card depends on the type of SIM1 card/SIM2 card provided by your network operator.

Enter a number in idle screen and press the OK key to save the number. Select the storage location. Then the edit interface appears. If To SIM1 card or To SIM2 card is selected, you need to edit the number only. If To phone is selected, you need to edit the items that you set in the settings of phone book, including the name, number, home number, company name, email address, office number, fax number, birthday, associate picture, associate sound and caller group.

In idle screen, press the right soft key to directly access the phone book.

The small icon on the left of the phone book list indicates whether the record is stored on the SIM1 card, the SIM2 card or the phone.

View	View the detailed information of the record.
Send Text Message	Send SMS after selecting a designated number.
Send multimedia Message	Send MMS after selecting a designated number.
Call	Dial phone number by the SIM1 card Call or SIM2 card Call
Edit	Edit the options included in a phone book record.
Delete	Delete the record.

Copy	Copy the record from the current storage to the other storage.
Move	Move the record from the current storage to the other storage.
Search contact	Exactly search the contact with fully name entry.
Copy contacts	Copy all the contacts from one location to another one.
Move contacts	Move all the contacts from one location to another one.
Send VCard	Send vCard by SMS/MMS or save it to file.
Add to Blacklist	Add the selected contact to the black member.

Caller groups	A caller group is the combination of phone settings used to identify a particular group of records. The phone provides five call groups: Friends, Family, VIP, Business and Others. You can manage and edit the details of caller groups.
Phonebook settings	View the memory status. Set the default storage of new numbers. Select the items required to be added when adding new numbers to the phone. Set name list filter. Edit and send your own vCard. Select vCard version.

You can also set caller ringtone or picture with just a click of a button.

6.2 Message

6.2.1 Text message

The phone supports Short Message Service (SMS) and Enhanced Message Service (EMS). You can send text messages and manage the messages that you sent and received.

If the memory for short messages is not full, short messages will be directly saved in the SIM card. A flashing icon  will appear on the top of the main screen if the memory is full.

1. Write Message

Create a new short message.

1. Go to **Message > Text message > Write Message** or press Left dedication key to enter text.
2. Press the left soft key (**Options**) and select the required items, including **Insert templates, Insert object, Text format, Insert number, Insert name, Insert bookmark**

and **Input method**.

3. Press the left soft key (**Options**) and select **Send to**.
4. Enter the recipient manually or select from the phonebook.
5. Press the OK key to send to SMS.

2. Inbox

Incoming short messages are saved in inbox.

View	View the message content.
Reply	Reply the short message.
Call back	Establish a call to the sender.
Forward	Send the SMS to other person.
Delete	Delete the short message.

Delete All	Delete all short messages in inbox.
Save to phonebook	Save the sender as a new contact in phonebook.
Mark several	Select the multiple messages.
Mark as unread	Change the message icon which indicates it has not been read.
Advanced	Other settings with the phonebook such as copy and move.

You cannot receive new messages if the memory for messages is full. Delete unnecessary messages.

3. Drafts

The text message which have not sent are saved here.

4. Outbox

Short messages successfully sent, not sent and to be sent are saved here.

5. Templates

The phone provides ten templates of text messages however these templates are editable.

6. SMS Settings

Set the following settings of short messages.

Profile Settings	Set profile name, SC address, validity period and message type.
Common Settings	Enable or disable the delivery report and reply path of short messages.
Memory Status	View the memory usage ratio of the SIM card and phone for short messages.

Preferred Storage	Set to save short messages to the SIM card or to the phone. By default messages get saved to phone memory.
--------------------------	--

6.2.2 MMS

The phone also supports Multimedia Message Service (MMS), which is a network service. It enables you to send messages with images, sounds and texts. Ask your service provider whether this service is available. You may need to subscribe to the service from your network operator before sending and receiving multimedia message.

All multimedia messages are stored in the memory of the phone. The SIM card cannot store multimedia messages.

1. Write Message

Create a new multimedia message.

Enter recipients in **To** by pressing the left soft key (**Edit**). Confirm with **Done**.

1. Enter a subject in **Subject** by selecting **Edit**. Press the left soft key (**Options**) and select **Done**.
2. Enter text in **Edit content** by selecting **Edit**.
3. Press the left soft key (**Options**) and select the items you want to send, including text, images (**Add picture**), audios (**Add audio**), files in other formats (**Add attachment**) and slide (**Add slide before/after**) and so on.
4. Confirm the contents by selecting **Options** and **Done**.
5. Press the right soft key (**Done**) for send options.

Send Only	Send the multimedia message to the corresponding recipient.
Save and Send	Save the multimedia message in outbox and send it to the corresponding recipient at the same time.

Save to Drafts	Save the multimedia message in Draft.
Save As Template	Save the multimedia message as a template.
Send Options	Set relevant options for sending multimedia message.
Exit	Exit the editing of MMS. A message will appear to ask you whether to save the MMS.

2. Inbox

Incoming multimedia messages are saved in inbox.

3. Outbox

You can view or process the multimedia messages saved in outbox.

4. Drafts

You can save a multimedia message as draft while creating it.

5. Templates

Besides user defined templates, the phone provides five templates of multimedia message in **Default**.

6. MMS Settings

Set the network setting includes the service operator in **Profiles**.

Set the common settings of multimedia messages.

Compose	Set how a multimedia message is composed, including creation mode, picture resizing, Best slide duration, auto signature and Signature.
----------------	---

Send	Set validity period, delivery report, read report, priority, slide timing and delivery time for sending multimedia messages.
Retrieve	Set home network, roaming, read report and delivery report for receiving multimedia messages.
Filter	Your phone will reject multimedia messages that meet the selected filter criteria here.
Memory Status	View the memory usage ratio, used space and free space for multimedia messages.

6.2.3 Broadcast Message

Broadcast messages are messages that your network operator broadcasts to all users within a particular area, such as weather forecast and transportation conditions.

Receive Mode	Enable or disable the function.
Read Message	Scroll to read broadcast messages.
Languages	Set languages for cell broadcast information. Only information in the set language can be received.
Channel Settings	Select the channel of cell broadcast.

For more information about available channels and the service, consult your service provider.

6.2.4 Voice Mail Server

Dial the voice mail number to access your voice mail. The number is provided by your network operator.

Call Mail	Voice	Connect to the current voice mailbox number.
Edit		Add or change the voice mailbox number.

Note: The voice mail function requires network support.

6.2.5 Voice Mail Server

Automatically send a SMS with predefined content and recipient at the time which you designated.

6.3 Call history

6.3.1 Call history

In idle screen, press the Master SIM key to directly access the call history.

1. Master card Call History

In idle screen, press the Master SIM key or go to **Call history** >

Call history > Master SIM call history > Master SIM missed calls/ Master SIM dialed calls/ Master SIM received calls, to view the call logs.

Select a call from the list. When the call is displayed, press the send key to make a call from the SIM1 card or the SIM2 card. You can press the OK key to view the details of the call. Select **Options** for more options.

View	View the call log information.
Call	Dial the selected number.
Send Text Message	Send a short message to the record.
Send Multimedia Message	Send a multimedia message to the record.

Save to Phonebook	Save the selected number to the SIM1 card , the SIM2 card or the phone.
Add to Blacklist	Add the contact to black list member.
Edit before call	Edit the number before establish a call to the contact.
Delete	Delete the select number from the list.

Delete Master SIM Call Logs: Delete missed calls, dialed calls or received calls, or delete all on the **SIM1 card** card.

Master SIM Call Timers: View **Last call time**, **Total dialed calls** and **Total received calls**, or **Reset all time** of the SIM1 card card.

Master SIM Call Cost: View **Last call cost** and **Total cost** of the SIM1 card card. You can also reset cost and set the maximum cost and the price per unit of the SIM1 card card. It requires network support.

Master SIM text message counter: View and reset the numbers of short messages sent and received on the SIM1 card card.

Master SIM GPRS Counter: View the volume of GPRS last sent, last received, all sent and all received on the SIM1 card card. You can also reset the contents of the counter on the SIM1 card card. The unit is Byte.

2. Slave SIM Call History

For the detailed information of **SIM2 card** call history, please refer to the content in “**SIM1 card call history**”.

6.3.2 Call settings

1. Master SIM call settings

Caller ID

7. Appendix I Troubleshooting

Available accessories with QT-44 are 1 Battery (1000mAH), 1 Dual Stereo Headset with call connect/disconnect button & 1 Travel Charger,

FCC Statement:

This device has been tested and found to comply with Part 15 of the FCC rules. Performance is subject to the following conditions:

This device may not cause harmful interference.

This device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the manufacturer or authorized service center could void the user's authority to operate this equipment.

If you encounter problems while using the phone, or if it performs erratically, you can consult the information in the following table. If a particular problem cannot be resolved by using the following information, contact the dealer where you purchased the phone.

Problem	Possible causes	Possible solution
Poor reception	The network signal is too weak at your current location, for example, in a basement or near a tall building, because wireless transmissions cannot effectively reach it.	Move to a location where the network signal can be properly received.
	The network is busy at the current time, for example, during peak times, because there may be too much network traffic to handle additional calls.	Avoid using the phone at such time, or try again after waiting a short time.

	You are too far away from a base station for your service provider.	You can request a service area map from your service provider.
Echo or noise	Poor network trunk quality on the part of your service provider.	Press the ending key and dial again. You may be switched to a better-quality network trunk or phone line.
	Poor local telephone line quality	Press the ending key and dial again. You may be switched to a better-quality network trunk or phone line.

Battery will not charge.	The battery or battery charger is damaged.	Contact the dealer.
	The temperature of the phone is below -10°C or higher than 55°C.	Adjust the battery charging environment to avoid extremes of temperature.
	Poor contact between the battery and charger.	Check all connectors to make sure all connections have been properly made.

Shortened standby time	The standby time is related to your service provider system configuration. The same phone used with different service providers' systems will not provide exactly the same length of standby time.	If you are located in an area where signaling is weak, temporarily switch off the phone.
	The battery is depleted. In high temperature environments, battery life will be shortened.	Use a new battery.

	If you are not able to connect to the network, the phone will continue to send out signals as it attempts to locate a base station. Doing so consumes battery power and will consequently shorten standby time.	Change your location to one where the network is accessible, or temporarily turn off your phone.
You cannot switch your phone on.	Battery power has been depleted.	Recharge the battery.
SIM card error	SIM card malfunction or damage	Take the SIM card to your service provider for testing.
	SIM card is inserted improperly.	Insert the SIM card properly.

	Debris on the SIM card contacts	Use a soft and dry cloth to clean the SIM card contacts.
Unable to connect to the network.	SIM card invalid.	Contact your service provider.
	You are not within the service area of the network.	Check the service area with your service provider.
	Poor signal.	Move to an open space, or if you are inside a building, move closer to a window.

You cannot answer incoming calls.	You have activated the call barring feature.	Go to Settings > General call settings > SIM1 card /SIM2 card call settings > Call Barring/Line Switching , and then select Cancel All/Line1 .
You cannot make outgoing calls.	You have activated the call barring feature.	Go to Settings > General call settings > SIM1 card/SIM2 card call settings > Call barring/Caller ID , and then select Cancel all/Set By network .

	You have activated the fixed dial number feature.	Go to Settings > Security Settings > SIM1 card/SIM2 card security Settings > Fixed dial , and select Off to disable this feature.
PIN Code is blocked.	You have entered an incorrect PIN code three consecutive times.	Contact your service provider. If the service provider provides the PUK code of the SIM card, use the PUK code to unlock the SIM card.

Unable to enter information into the phone book.	The memory of the phone book is already full.	Delete unnecessary data from the phone book.
Unable to select certain features.	Your service provider does not support these features, or you have not applied for services that provide these features.	Contact your service provider.

8. Appendix II Abbreviations and Explanation

GSM	Global System of Mobile Communication
GPRS	General Packet Radio Service
SMS	Short Message Service
WAP	Wireless Application Protocol
FDN	Fixed Dialing Numbers
SIM	Subscriber Identity Module
PIN	Personal Identification Number
PUK	Personal Unblocking Key
