1 First use

Install/Replace the battery

Before battery replacement, please confirm you have switched off the phone.

Insert/Replace the SIM card

1. Before SIM card replacement, please confirm you have switched off the phone and taken the battery out.

-
2. Make the metal magnetic strip of the SIM card contact with the metal strip, and place it in the slot.

Charging of the mobile phone

1. Before charging, please confirm you have correctly installed the battery into the phone.
2. Plug the charger port into the jack and then connect the charger with AC power.
3. If the phone is off during charging, the screen will display the charging animation. When the phone is on, the user may use the phone during charging. When the charging is completed, the charging animation on the screen will stop in full-capacity state of the battery. Please use the phone when the battery is fully charged after the power is completely used up for the first time; charge it after the power is completely used up for the second time, as a result, the battery will reach the best state after three consecutive cycles.
4. If the battery voltage is too low due to long-term non-use and other reasons, the screen will be blank when charging and will display the charging animation after several minutes.

Warning: please do not move or remove the battery during charging to avoid severe burning of the phone circuit.

2 Call functions

Keypad lock

Lock: Press left soft key and ‘*’

Unlock: Press left soft key and ‘*’

Make a call

1. Method 1: In standby mode, Dial phone number (to dial a fixed number, add the area code), and then press Dial key and choose SIM1 or SIM2 to make a call.

Note: this function is not available in some models, so it is subject to the model you purchase.

4.8 Additional functions

Including File Management, Alarm, Calculator, Stopwatch, Unit converter and so on.

5 Preventive measures for safety consideration and notes

■ Notes when carrying the phone with you

Remember to follow the current specific rules and regulations wherever you are and switch off your phone whenever it is prohibited from using, or whenever it may cause interference or a danger. No matter the phone is used in normal operating position near the ears or in the position 2.5cm away from the body, it meets the requirements of radio-frequency radiation rules all the time. If you need to carry the phone by using a cell phone sock or a belt clamp, you shall make sure that these accessories do not have metal components, and they must be in the position of at least 2.5cm from the body.

■ Radio-frequency interference compatibility

Your phone may have radio-frequency interference in the electronic equipment without proper shielding or compatibility configuration.

■ Public places

Please switch off your phone wherever such notice is posted. These places include medical places such as hospitals and nursing homes since these places may be using the equipment sensitive to external radio frequency signals.

■ Airplane safety rules

In or near an airplane, please switch off your phone and remove the battery or turn off the radio. Using the mobile phone in an airplane is illegal. It may bring danger to airplane operation and damage the mobile phone network. Offenders may be prosecuted or even subject to double punishments.

■ Pacemaker

If you are using a cardiac pacemaker, please do not put the switched-on phone in your coat pocket. The distance between the phone and the pacemaker must be at least 15cm. Please use the phone on the other side of the pacemaker to reduce the potential interference. If you doubt that interference has happened, please switch off the phone or turn off the radio immediately.

■ Hearing-aid

The phone may interfere with some hearing-aids. In case of interference, please ask hearing-aid manufacturer for a solution.

■ Other medical equipments

If you use other personal medical equipments, please consult the equipment manufacturers to make sure whether they can fully shield the radio frequency signals around. You can also consult doctors for relevant information.

■ Notes when driving

If you are using the phone while driving, please follow related provisions in the traffic laws. If the driving conditions are not good, please park the vehicle at a roadside to dial or answer the phone. If your vehicle is equipped with airbags, please do not put the phone in the area where the airbags may get when they expand; otherwise, serious damages may be caused in the event of airbags expansion.

■ Places in which it may cause an explosion:

Before entering into the places in which explosions may be caused by potential factors, please switch off the phone. The areas in which it may cause an explosion include: fuel areas (such as the area under the deck, transporting or storing facilities of fuels or chemical products), places in which there are chemicals or specks in the air (such as particles, dirt or metallic powder). There are usually signs in the places prone to lead to an explosion, but not all the places have such signs.

■ Electromagnetic radiation

The product has a maximal value of 1.6 W/kg of specific absorption rate for electromagnetic radiation which completely meets the requirements in GB 21288-2007.

- Battery

If conductors such as jewelry and keys contact with exposed electrode, it may cause property loss and personal injury.

- Notes for child's use

Please keep the phone out of the reach of children, in case that the children regard it as a toy and cause personal injury. Besides, they may unconsciously damage the phone or its accessories. Tiny parts in the phone or other accessories may be disassembled and swallowed.

- Other notes

Non-specialists are prohibited from disassembling the phone without authorization. It can only use accessories approved by our company. If you use other power accessories, you will violate the approving and warranty terms and cause dangers.
