The QCP 3000 Series Phones by Kyocera

The QCP 3000 Series phones by Kyocera have a clear view—of the Internet.* The large display is so big you can look at Web sites specially formatted for your phone without squinting. Go ahead: Send and receive some e-mail; you'll be able to read that, too.*

In addition to having data capabilities, these phones also have some very sophisticated voice features. Like a speakerphone for conference calls. And voice recognition. Just say the name of the person you're calling—and the phone makes the call. There's more. Set it to vibrate when an audible ring is inappropriate. In a noisy place? The QCP 3000 Series phones automatically adjust the earpiece volume.

That would seem to be enough for one series of phones, but these phones have personal productivity tools, too. Like a scheduler to keep track of your agenda and a contact directory for names, addresses and phone numbers. Not to mention Code Division Multiple Access (CDMA) digital technology, which gives you wireless voice and data of uncommon quality and clarity. We try to think of everything—or at least enough to make your life easier.

Kyocera Wireless Corp. is a wholly owned subsidiary of Kyocera International, Inc., which acquired QUALCOMM Incorporated's CDMA consumer wireless phone business. Kyocera Wireless Corp. incorporates QUALCOMM's CDMA technology in the development and manufacture of wireless phones and accessories for customers worldwide.
